WEEK 5 | DAY 2 | TUE NOV 3

Twin and Clone Generation.

Create a consistent digital version of a person, responsibly.

10:00 a.m. - 12:00 p.m. | Multan Office

Instructor Muhammad Farukh F.

TODAY'S AGENDA

Two hours, eight steps.

10:00	Recap: storyboards and characters	10 min
10:10	What is a digital twin?	10 min
10:20	Consent and ethics	25 min
10:45	Short break	10 min
10:55	Building your twin	20 min
11:15	Using the twin in scenes	20 min
11:35	Hands on	15 min
11:50	Quick check and recap	10 min

THE IDEA

A consistent digital version.

- A twin is an AI version of a person that looks the same in every shot
- It can be you, a volunteer or a made-up character
- Used for presenters, reels, explainers and ads
- Rules and features differ between tools

Remember

Quality depends on clear, well lit reference photos.

CONSENT FIRST

Ethics before technology.

- Use only your own face, or written permission from the person
- Never make a twin of a stranger or a public figure
- Never use a twin to mislead or to say things the person did not say
- Many tools restrict real people. Follow each tool rules

Rule

No consent, no twin.

REFERENCE PHOTOS

Collect good source images.

- Take 4 to 8 clear photos of the face
- Use different angles: front, left, right
- Use soft, even light and a plain background
- Keep the same hair and simple clothes

Avoid

Sunglasses, heavy filters, blurry or dark photos.

BUILD IT

Four steps to a twin.

- Upload or select your reference photos
- Write one description: face, hair and style
- Generate a first image and review the likeness
- Reuse the best image as the reference for new scenes

Tip

Save the winning image and the exact prompt.

SCENES

Put the twin to work.

- Change one thing per prompt: place, action or camera
- Say "same person as the reference"
- Keep the light and style words the same
- Plan the scenes in your storyboard first

Example

Same person as the reference, now sitting at a laptop in a bright office, medium shot, soft window light.

STYLIZED TWIN

A safe alternative.

- Make a cartoon or illustrated version of yourself
- It is easier to keep consistent
- It avoids many realism and policy problems
- Great for reels, channels and logos

Example

A flat illustration of a young man with glasses and a green hoodie, friendly smile.

CHECKING LIKENESS

Does it look right?

- Compare each result with your reference photos
- Look at the eyes, nose, face shape and hair
- Reject results that look like someone else
- Ask a friend if it looks like you

Habit

Delete weak results. Keep only your best three.

EXAMPLES

Four twin prompts.

1 Base	A clear portrait of the person in the reference photo, soft studio light, plain gray background, neutral smile, 1:1.
2 Scene	Same person as the reference, sitting at a cafe table with a laptop, medium shot, warm light, realistic photo.
3 Stylized	A flat illustration of the same person, short hair and glasses, green hoodie, waving, white background.
4 Video	Same person as the reference, talking to the camera in a bright room, medium shot, slow push in, 6 seconds.

HANDS ON

Create your own twin.

- [ ] Collect your own reference photos
- [ ] Write one description of yourself
- [ ] Generate and review a base image
- [ ] Create two new scenes with the same person
- [ ] Make one stylized version
- [ ] Save the best images and prompts

QUICK CHECK

Five questions.

- [ ] What is a digital twin?
- [ ] Whose face can you use?
- [ ] Why are reference photos important?
- [ ] Name one safe alternative to a realistic twin
- [ ] How do you check the likeness?

RECAP

What you learned today.

Covered

- Twins and consent
- Reference photos and prompts
- Scenes and stylized twins

Homework

- Finish your twin and three scenes
- Write your ethics rule in your diary
- Bring your diary

Next class

- Advanced Flow
- Scene extension and camera control
- Your 45 second AI short
