DAY 1 | MONDAY, OCT 5, 2026

Premiere Foundations.

Setup and organization: the first step to professional editing.

10:00 a.m. - 12:00 p.m. | Multan Office

Instructor Muhammad Farukh F.

WELCOME

Eight weeks. One goal.

By Nov 27 you will edit, generate and deliver client ready video, and know how to land work on Upwork.

1 Premiere Foundations

We are here

2 Premiere Advanced + AI

3 Prompt Anatomy + Adobe Intro

4 Gemini, ChatGPT + Flow

5 Flow, Higgsfield + Canva

6 HeyGen + AI Co-pilots

7 Social Media Content

8 Social Wrap + Upwork

GROUND RULES

Four habits for a focused class.

1

Be Punctual

Seated by 9:50 a.m. Sign attendance yourself.

2

Phones Away

Silent and in your bag. Use only when asked.

3

Bring Your Diary

Note key points, shortcuts and settings.

4

Participate

Ask questions. Practice every task.

TODAY'S AGENDA

Two hours, eight steps.

10:00	Welcome and ground rules	10 min
10:10	How video editing works	10 min
10:20	Interface tour and workspaces	30 min
10:50	Short break	10 min
11:00	New project, sequences, importing	25 min
11:25	Bins, labels and proxies	15 min
11:40	Hands on practice	15 min
11:55	Recap and homework	5 min

THE BIG PICTURE

How every edit is made.

1 **Ingest** > 2 **Organize** > 3 **Edit** > 4 **Polish** > 5 **Export**

Today: steps 1 and 2

A clean start saves hours later.

Weeks 1 to 8 build every step, then add AI, social and client delivery.

STEP 1

Starting a project the right way.

- Name it clearly: ClientName_Project_Date
- Save on your fastest drive, in one project folder
- Check Scratch Disks so cache files stay with the project
- Review Ingest Settings if you plan to use proxies
- Press Save right away, then every few minutes

Example name

Demo_Reel_2026-10-05

Why it matters

Clear names make files easy to find, share and hand over to a client months later.

INTERFACE TOUR

Know your workspace.

Source Monitor
Preview raw clips

Program Monitor
See your edit

Effects + Essential Panels
Effects, graphics, sound

Project Panel
Media and bins

Tools

Timeline
Where you build the edit

Audio
meters

Tip: if a panel disappears, open it again from the Window menu.

WORKSPACES

One layout for every job.

E **Editing**
Everyday cutting

A **Assembly**
Sort and rough cut

C **Color**
Grading tools

A **Audio**
Mixing and cleanup

G **Graphics**
Titles and shapes

E **Effects**
Effect controls

Lost your layout?

Window > Workspaces > Reset to Saved Layout brings everything back.

STEP 2

Sequence settings that match.

Platform	Frame size	Frame rate
YouTube (landscape)	1920 x 1080	24 / 25 / 30 fps
Reels, Shorts (vertical)	1080 x 1920	30 fps
Square post	1080 x 1080	30 fps

Easiest way

Right click your clip > New Sequence From Clip. Premiere matches the footage for you.

Always match the frame rate of your footage to avoid stutter.

STEP 3

Importing your media.

Three ways to import

- File > Import (Ctrl/Cmd + I)
- Media Browser panel
- Drag and drop into the Project panel

Good habits

- Copy footage into one project folder first
- Do not rename or move files after importing
- Import only what you need
- Check audio plays before you start editing

ORGANIZE

Bins, labels and naming.

- 01_Footage
- 02_Audio
- 03_Graphics
- 04_Sequences
- 05_Exports

Make it searchable

- Create bins for each type of media
- Use color labels: interviews, B-roll, music
- Name clips clearly, in the same style
- Right click > Rename for quick fixes

FILE MANAGEMENT

Proxies and staying safe.

Proxies

- Lightweight copies of heavy footage
- Use for 4K or a slower laptop
- Right click clip > Proxy > Create Proxies
- Toggle proxies on and off in the Program Monitor

Protect your work

- Turn on Auto Save and shorten the interval
- Use Save As for versions: v01, v02, v03
- Keep a backup copy on another drive
- Offline media? Right click > Link Media

SHORTCUTS

Start with the essentials.

Space	Play / pause	I and O	Mark in / out
J K L	Rewind, stop, forward	V	Selection tool
C	Razor tool	Ctrl/Cmd + S	Save
Ctrl/Cmd + Z	Undo	Ctrl/Cmd + I	Import

HANDS ON

Your practice task.

- [ ] Create a new project named Demo_Reel_2026-10-05
- [ ] Import the provided footage, audio and logo
- [ ] Build bins: Footage, Audio, Graphics, Sequences, Exports
- [ ] Create a sequence that matches your footage
- [ ] Create proxies for one video clip
- [ ] Save, then Save As a v02 copy

QUICK CHECK

Five questions.

1. Which panel shows your finished edit?
2. What does New Sequence From Clip do?
3. Why do we create proxies?
4. Name two ways to import media.
5. Which shortcut marks an in point?

RECAP

What you learned today.

Covered

- Project setup
- Interface and workspaces
- Sequences and importing
- Bins, labels, proxies

Homework

- Repeat the setup on your own footage
- Memorize 5 shortcuts
- Bring your diary tomorrow

Tomorrow

- Core Editing
- Razor, ripple, roll
- Slip, slide and shortcuts
