DAY 2 | TUESDAY, OCT 6, 2026

Core Editing.

Cut with confidence: razor, ripple, roll, slip and slide.

10:00 a.m. - 12:00 p.m. | Multan Office

Instructor Muhammad Farukh F.

WELCOME BACK

Yesterday in 30 seconds.

1. Created a clean project with a clear name
2. Explored the interface and workspaces
3. Matched sequence settings to footage
4. Imported media and built bins
5. Created proxies and saved versions

Questions or homework to share? Now is the time.

TODAY'S AGENDA

Two hours, eight steps.

10:00	Recap and questions	10 min
10:10	The timeline and adding clips	15 min
10:25	Selection, razor and trimming	25 min
10:50	Short break	10 min
11:00	Ripple, rolling, slip and slide	25 min
11:25	Shortcut speed drill	10 min
11:35	Hands on: rough cut	20 min
11:55	Recap and homework	5 min

THE MINDSET

Great editing is invisible.

1

Cut with purpose

Every cut should move the story forward.

2

Keep the pace

Remove pauses and dead air. Hold only what matters.

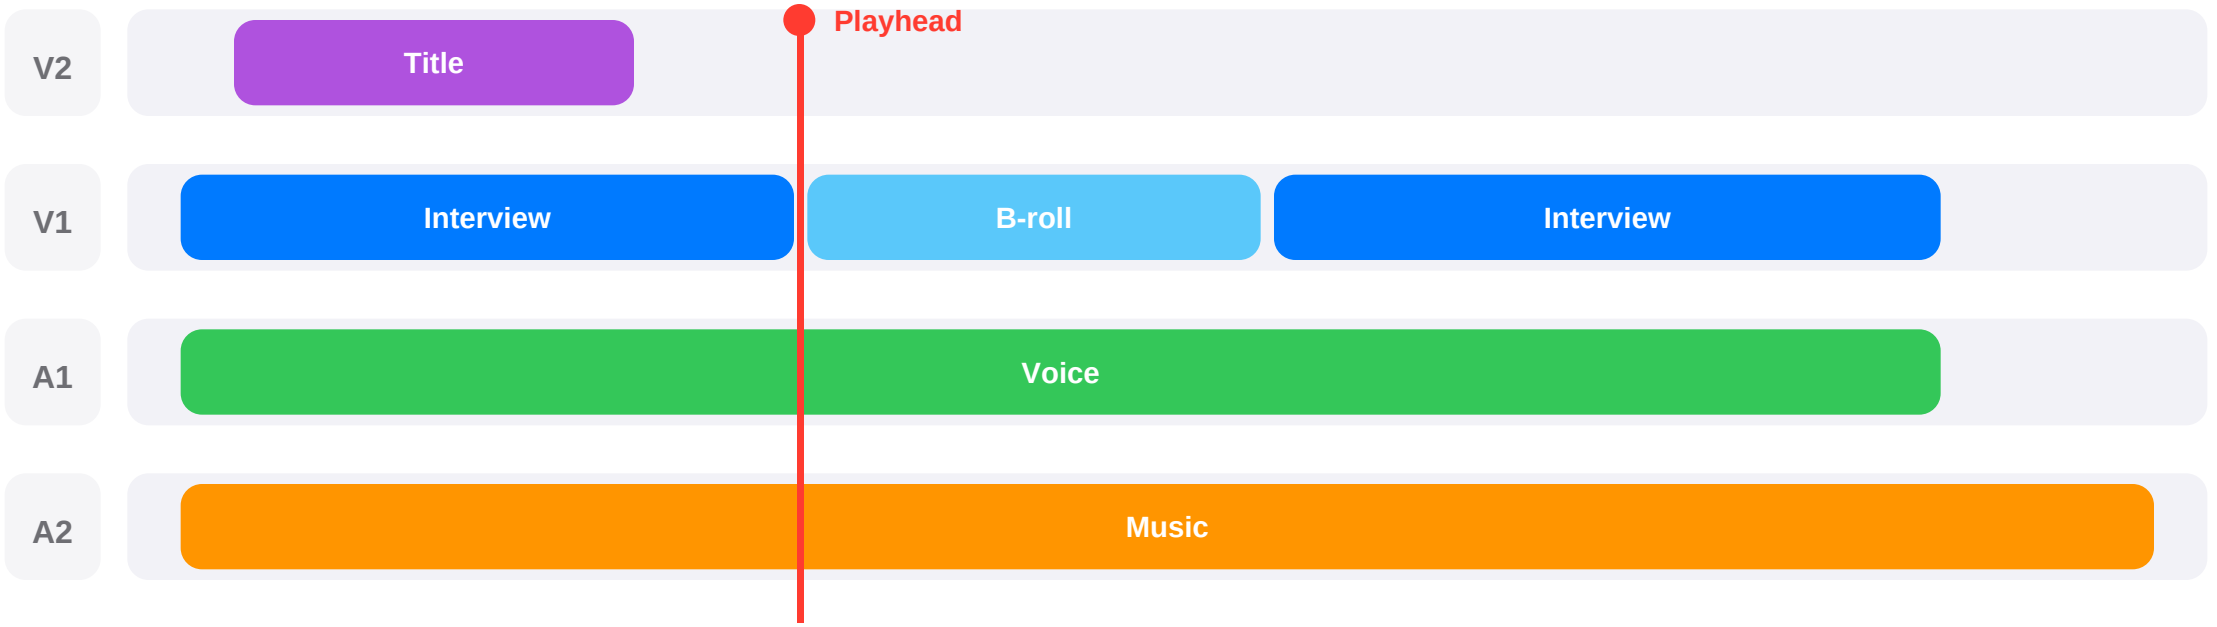
3

Serve the story

Tools are a means. The viewer comes first.

THE TIMELINE

Anatomy of a timeline.



V = video tracks A = audio tracks Playhead = where you are now

ADDING CLIPS

Insert or overwrite?

- Mark In and Out in the Source Monitor
- Comma (,) inserts: pushes later clips right
- Period (.) overwrites: replaces what is there
- Or drag the clip onto the timeline

CUTTING

Selection and razor.

V

Selection tool

Select, move and trim clips. Your default tool.

C

Razor tool

Click a clip to cut it into two parts.

Ctrl/Cmd + K

Add Edit

Cuts at the playhead on the selected track.

Shift + Delete

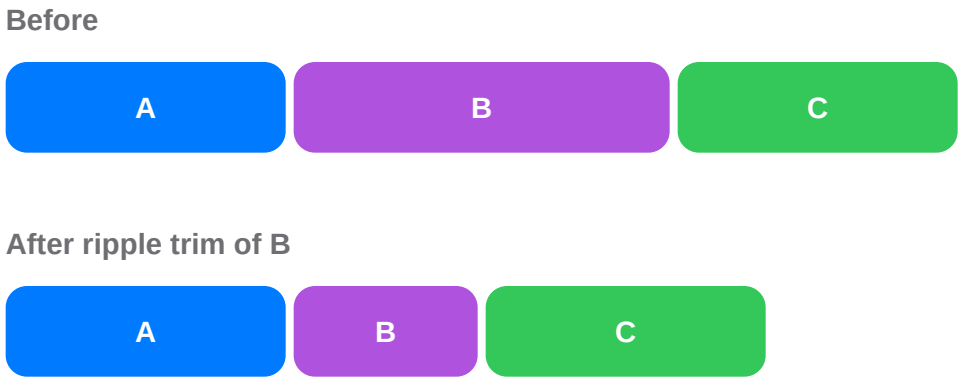
Ripple Delete

Removes a clip and closes the gap.

TRIMMING

Ripple edit (B).

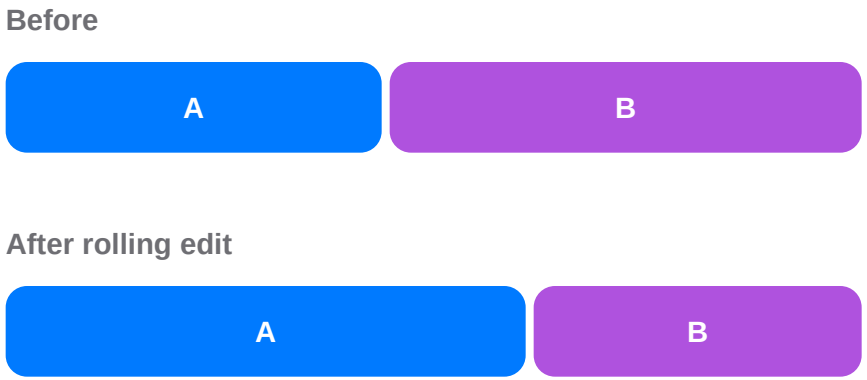
- Trims a clip and closes the gap
- Later clips move left automatically
- Total length changes
- Best for removing pauses and mistakes



TRIMMING

Rolling edit (N).

- Moves the cut point between two clips
- One clip gets longer, the other shorter
- Total length stays the same
- Best for fine tuning where a cut lands



ADVANCED TRIMS

Slip (Y) and Slide (U).

Slip

Changes which part of the clip plays. Position and length stay the same.

Source footage

After slip

Slide

Moves a clip. Neighbors adjust. The clip itself stays the same.

Before

After sliding B right

CHEAT SHEET

Which tool, when?

Tool	Key	What it does	Length changes?
Selection	V	Select, move, trim	Depends
Razor	C	Cut a clip in two	No
Ripple Edit	B	Trim and close the gap	Yes
Rolling Edit	N	Move a cut between clips	No
Slip	Y	Change the visible part of a clip	No
Slide	U	Move a clip between neighbors	No

SPEED DRILL

Shortcuts to practice.

V C B N Y U	Tool shortcuts	I and O	Mark in / out
Comma / Period	Insert / overwrite	Ctrl/Cmd + K	Add edit
Shift + Delete	Ripple delete	Home / End	Jump to start / end
J K L	Rewind, stop, forward	Ctrl/Cmd + S	Save

PRO TIPS

Edit like a professional.

Cut on action

Cut while movement happens. It feels smooth.

Trim dead air

Remove pauses and filler words first.

Use markers

Press M to flag moments you want to return to.

Watch it back

Play your cut without stopping. Fix what feels slow.

HANDS ON

Rough cut a 60 second interview.

- [ ] Import the interview and B-roll into your bins
- [ ] Mark the best answers with I and O in the Source Monitor
- [ ] Assemble them on V1 with Insert (comma)
- [ ] Remove pauses with the Ripple Edit tool (B)
- [ ] Fine tune cut points with Rolling Edit (N)
- [ ] Save as v03 when you finish

QUICK CHECK

Five questions.

1. Which tool trims and closes the gap automatically?
2. Which key switches to the Razor tool?
3. What does Rolling Edit change?
4. Insert vs overwrite: what is the difference?
5. Which two tools keep total length the same?

RECAP

What you learned today.

Covered

- Timeline anatomy
- Insert and overwrite
- Razor, ripple, rolling
- Slip, slide, shortcuts

Homework

- Redo the rough cut with new footage
- Practice tool shortcuts for 15 minutes
- Bring your diary tomorrow

Tomorrow

- Audio Basics
- Levels and Essential Sound
- Enhance Speech and music ducking
