WEEK 2 | DAY 1 | MONDAY, OCT 12, 2026

Color and Keyframes.

Fix, match and grade color. Animate with confidence.

10:00 a.m. - 12:00 p.m. | Multan Office

Instructor Muhammad Farukh F.

WELCOME BACK

Last week in 30 seconds.

- Setup, import, bins and proxies
- Razor, ripple, rolling, slip and slide
- Levels, Essential Sound, Enhance Speech, ducking
- Titles, transitions, speed and keyframes
- Export settings and your first complete video

TODAY'S AGENDA

Two hours, nine steps.

10:00	Recap and questions	10 min
10:10	Why color matters	10 min
10:20	Lumetri basic correction	25 min
10:45	Short break	10 min
10:55	Curves, HSL and looks	20 min
11:05	Color matching	10 min
11:25	Keyframe animation	15 min
11:40	Hands on: grade two clips	15 min
11:55	Recap and homework	5 min

THE WORKFLOW

Correct, match, then grade.

1

Correct

Fix exposure and white balance

>

2

Match

Make shots look consistent

>

3

Grade

Add a creative look

Always fix problems before you add style.

LUMETRI COLOR

One panel, six sections.

Basic Correction

White balance, tone, saturation

Creative

Looks and LUTs

Curves

Contrast and color control

Color Wheels and Match

Shadows, mids, highlights

HSL Secondary

Isolate one color

Vignette

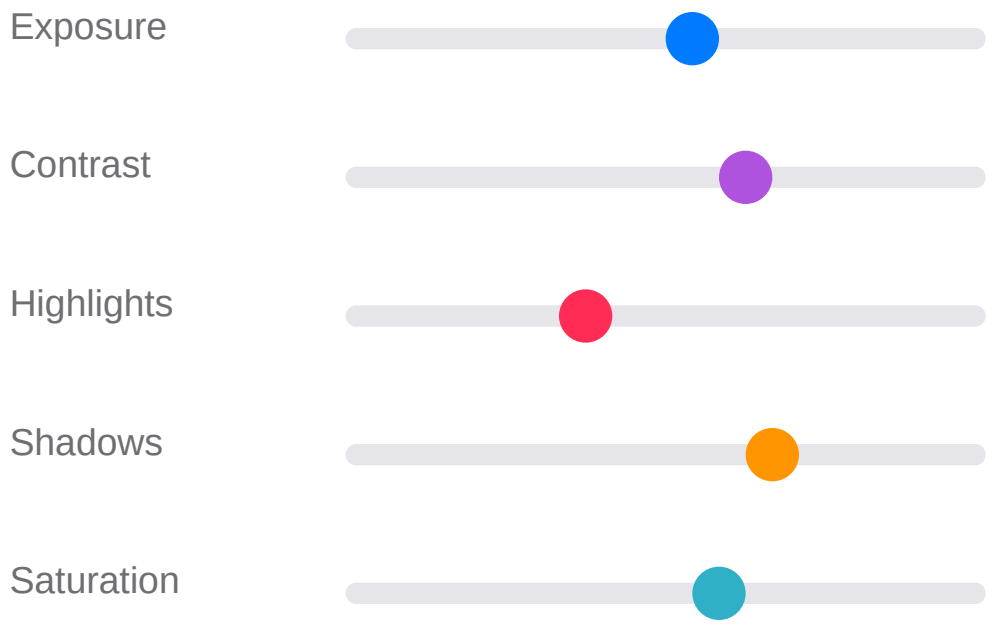
Edge darkening

Open it: Window > Lumetri Color, or use the Color workspace.

BASIC CORRECTION

Fix it in this order.

- White balance: remove color casts
- Exposure and Contrast: set overall brightness
- Highlights and Shadows: recover detail
- Whites and Blacks: set the range
- Saturation last, in small amounts



SCOPES

Trust the scopes.

- Window > Lumetri Scopes
- Waveform: shows brightness from 0 to 100
- Vectorscope: shows color and skin tones
- Keep skin tones near the diagonal skin line

Eyes can be fooled

Screens, rooms and tired eyes change how we see color. Scopes give the real numbers.

ADVANCED

Curves and secondary color.

RGB Curves

An S-curve adds contrast

Hue vs Saturation

Boost or mute one color range

HSL Secondary

Pick a color with the eyedropper

Refine

Soften edges so it looks natural

COLOR MATCHING

Make two shots agree.

- Match exposure first, then white balance, then saturation
- Use Comparison View to see both shots
- Color Wheels and Match: Apply Match for a quick start
- Paste Attributes: Ctrl/Cmd + Alt + V
- Adjustment layer: one look over many clips

Reference frame

Pick the best looking shot and make the others match it.

KEYFRAMES

Animate with four properties.

Scale

Slow zoom: 100% to 110%

Position

Pan or slide a clip in

Opacity

Fade in and fade out

Rotation

Use sparingly, with a reason

HANDS ON

Grade two mismatched clips.

- [ ] Import two clips shot in different light
- [ ] Correct exposure and white balance on clip 1
- [ ] Open Comparison View and match clip 2 to it
- [ ] Add a gentle look with a curve or Creative tab
- [ ] Add a slow zoom on one clip with easing
- [ ] Save as v07

QUICK CHECK

Five questions.

- [ ] What is the difference between correcting and grading?
- [ ] Which panel holds the color tools?
- [ ] What does the waveform measure?
- [ ] Name one way to match two shots.
- [ ] Which property creates a slow zoom?

RECAP

What you learned today.

Covered

- Correct, match, grade
- Lumetri sections and scopes
- Curves and HSL secondary
- Color matching and keyframes

Homework

- Grade your mini project
- Match two shots by eye, then by scopes
- Bring your diary tomorrow

Tomorrow

- Masks and Structure
- AI Object Mask and tracking
- Nesting and adjustment layers
