WEEK 4 | DAY 1 | FOLLOW ALONG

Gemini Image Use Cases.

Three step by step demos to guide your trainees.

Trainer guide | Multan Office

Instructor Muhammad Farukh F.

HOW TO USE THIS DECK

Demo, then trainees repeat.

- Each use case has an overview, then step slides
- Read the step, type the prompt on screen, and say what you changed
- Pause at each Check line and let trainees compare
- Trainees repeat each step on their own screen

Three use cases

1 Product ad image. 2 YouTube thumbnail. 3 Consistent character for a story.

BEFORE THE DEMO

Quick setup checklist.

- [ ] Sign in to gemini.google.com with a Google account
- [ ] Open a new chat for each use case
- [ ] Have a product photo and a portrait photo ready (with permission)
- [ ] Copy the prompts into a notes file to paste quickly
- [ ] Create a folder for the results
- [ ] Check that your daily image limit is not reached

USE CASE 1

Product ad image.

- Goal: a clean advert image for a water bottle
- You will generate, edit the background, adjust the light and make a vertical version
- Skills: seven part prompt, conversational edits, keeping the subject
- Time: about 15 minutes

You will need

Nothing to upload. Optional: your own product photo.

USE CASE 1 | STEPS 1 TO 3

Generate and edit.

1 Generate the base image

A steel smart water bottle standing on a white table, product photo, close up, soft studio light, clean and modern mood, 4:5. No text, no watermark.

Check: the bottle shape is clear and the background is clean

2 Change the background

Keep the bottle exactly the same. Change the background to a bright gym with a soft blur.

Check: the bottle did not change

3 Adjust the light

Keep everything the same. Make the light warmer and add small water drops on the bottle.

Check: only the light and drops changed

USE CASE 1 | STEPS 4 AND 5

Variation and save.

4 Make a vertical version

Create this image again in vertical 9:16 for an Instagram Story, with empty space at the top for text.

Check: there is clear space for text

5 Pick the best and save

Download your favorite image. Write the winning prompt in your notes file.

Check: you can repeat the result from your saved prompt

USE CASE 2

YouTube thumbnail.

- Goal: a bright thumbnail for "Learn Video Editing in 7 Days"
- You will generate, blend your own photo, refine, and add text safely
- Skills: blending, edits, checking text
- Time: about 20 minutes

You will need

One portrait photo of the trainer or a volunteer who agrees to be used.

USE CASE 2 | STEPS 1 TO 3

Generate, blend, refine.

1 Generate the base thumbnail

YouTube thumbnail, 16:9: a surprised young creator holding a camera, bright yellow background, big empty space on the left for text, high contrast. No text.

Check: space on the left, strong colors

2 Blend a real portrait

Upload your portrait and the base image. Use the first image as the person and place him in the second image. Keep his face the same.

Check: the face still looks like the original

3 Refine the colors

Make the background more blue and the light brighter. Keep the person the same.

Check: the person did not change

USE CASE 2 | STEPS 4 AND 5

Text and export.

4 Add the title text

Add the words LEARN EDITING in bold white letters on the left. Or add text later in Canva or Premiere for full control.

Check: every letter is spelled correctly

5 Test it small

Shrink the image to phone size and check that the text and face are still clear.

Check: readable at a small size

USE CASE 3

Consistent character.

- Goal: the same cartoon character in three story scenes
- You will create the character, then place him in new scenes
- Skills: character description, same chat, checking consistency
- Time: about 20 minutes

You will need

Nothing to upload. Keep everything in one chat.

USE CASE 3 | STEPS 1 TO 3

Create and place him.

1 Create the character

Create a cartoon character: a friendly 25 year old man with short black hair, glasses and a green hoodie. Full body, standing, white background, flat illustration style.

Check: you can describe him in one sentence

2 Scene one: cafe

Same character, now sitting at a laptop in a cafe, side view, warm light, flat illustration style.

Check: hair, glasses and hoodie match

3 Scene two: rooftop

Same character, now holding a camera on a rooftop at sunset, wide shot, flat illustration style.

Check: the style matches the first image

Finish the story.

4 Scene three: studio

Same character, now celebrating with both arms up in a studio, medium shot, flat illustration style.

Check: he is clearly the same person

5 Fix any drift

If the character changes, paste the full description again: a friendly 25 year old man with short black hair, glasses and a green hoodie.

Check: the next result matches again

TROUBLESHOOTING

Common problems and fixes.

Spelling is wrong in the image

Add the text later in Canva or Premiere

The subject changed in an edit

Say "keep the subject exactly the same"

Character looks different

Paste the full character description again

Hands or faces look odd

Regenerate, or ask for a closer, simpler shot

Daily limit reached

Wait, or continue the next day

Result is too busy

Remove details and keep one subject

TRAINER TIPS

Make the demo easy to follow.

- [ ] Say each prompt out loud as you type it
- [ ] Change only one thing at a time
- [ ] Ask trainees to predict the result before you press enter
- [ ] Show one failed result and how you fixed it
- [ ] Give trainees 5 minutes to repeat each step
- [ ] Keep the final images for the Week 4 mini project

RECAP

What trainees can do now.

Skills

- Generate with a seven part prompt
- Edit by conversation
- Blend and keep characters consistent

Practice

- Repeat all three use cases alone
- Make one new use case of your own
- Save every prompt in your library

Next class

- ChatGPT Image Generation
- Compare it with Gemini
- Prompt debugging
