WEEK 4 | DAY 2

ChatGPT
Image Generation.

Create, edit and refine images in a chat.

10:00 a.m. - 12:00 p.m. | Multan Office

Instructor Muhammad Farukh F.

TODAY'S AGENDA

Two hours, eight steps.

10:00	Recap: Gemini images	10 min
10:10	Meet ChatGPT image generation	10 min
10:20	Generating images in chat	25 min
10:45	Short break	10 min
10:55	Text, logos and thumbnails	20 min
11:15	Editing and reference images	20 min
11:35	Hands on	15 min
11:50	Quick check and recap	10 min

MEET CHATGPT IMAGES

Images from a conversation.

- Open chatgpt.com and sign in
- Ask for an image in plain words
- You can upload photos and ask for edits
- Free accounts have daily limits that change often

Note

Check your own account. Features depend on your plan and country.

PROMPTING

Detail wins.

- Use the seven parts: subject, scene, style, camera, light, mood, negatives
- Add the shape: 16:9, 9:16 or 1:1
- Be specific about colors and positions
- ChatGPT often follows long, detailed prompts well

Example

A steel water bottle on a gym bench, product photo, close up, soft studio light, clean mood, 4:5. No extra text.

TEXT IN IMAGES

Put the words in quotes.

- Write the exact text in quotes
- Say where it goes and the style: bold white, top left
- Keep the text short: two to five words
- Always check the spelling

Example

A cafe poster with the words "FRESH COFFEE" in bold white letters at the top, warm brown background.

LOGOS AND THUMBNAILS

Simple and bold.

- Logos: one idea, two or three colors, flat style
- Thumbnails: big face, bright color, space for text
- Test it small on a phone screen
- Never copy a real brand logo

Example

A simple logo for a tea shop: a cup with steam, green and cream colors, flat design, white background.

EDITING

Refine step by step.

- Ask for one change at a time
- Say what to keep: "keep the same layout"
- Upload your own photo to edit it
- If the result drifts, restate the full prompt

Example

Keep everything the same. Change the sky to sunset colors and make the cup a little larger.

REFERENCE IMAGES

Show it, do not only tell it.

- Upload an image as a style or layout reference
- Say what to copy: colors, mood or composition
- Say what NOT to copy: faces or logos
- Use references you own or have permission to use

Example

Use the uploaded image as a style reference. Create a new poster for a rainy day in the same colors and mood.

EXAMPLES

Five ChatGPT prompts.

1 Poster	A cafe poster with the words "FRESH COFFEE" in bold white letters, warm brown background, a steaming cup in the center, flat illustration, 4:5.
2 Logo	A simple logo for a video editing studio: a play button inside a circle, blue and white, flat design, white background.
3 Thumbnail	YouTube thumbnail, 16:9: a surprised creator with a camera, yellow background, space on the left for text, high contrast.
4 Edit	Keep the person and layout exactly the same. Change the background to a sunny park and make the light warmer.
5 Reference	Use the uploaded image as a style reference. Create a product photo of a water bottle in the same colors and soft light.

RESPONSIBLE USE

Create honestly.

- Do not copy real brand logos or artists
- Do not create fake images of real people
- Check text, hands and faces before using
- Tell clients when AI made the image

Rule

AI helps your story. It must never mislead viewers.

HANDS ON

Make a mini brand kit.

- [ ] Create a logo for an imaginary tea shop
- [ ] Make a poster with a short quoted text
- [ ] Create a thumbnail with space for text
- [ ] Edit one image with two separate messages
- [ ] Try one reference image
- [ ] Save your three best results and their prompts

QUICK CHECK

Five questions.

- [ ] How do you ask for exact text in an image?
- [ ] Why keep text short?
- [ ] What does a reference image do?
- [ ] Why make one edit at a time?
- [ ] Name one rule for logos

RECAP

What you learned today.

Covered

- Generating images in ChatGPT
- Text, logos and thumbnails
- Edits and reference images

Homework

- Make a logo and a poster
- Compare one prompt in Gemini and ChatGPT
- Bring your diary

Next class

- Model Showdown
- Prompt debugging
- Choosing the right tool
