WEEK 4 | DAY 3

Model Showdown and Debugging.

Compare tools fairly. Fix weak results.

10:00 a.m. - 12:00 p.m. | Multan Office

Instructor Muhammad Farukh F.

TODAY'S AGENDA

Two hours, eight steps.

10:00	Recap: Gemini and ChatGPT images	10 min
10:10	Why compare tools?	10 min
10:20	Running a fair showdown	25 min
10:45	Short break	10 min
10:55	Prompt debugging: find the problem	20 min
11:15	Prompt debugging: fix it	20 min
11:35	Hands on	15 min
11:50	Quick check and recap	10 min

WHY COMPARE

No tool wins every time.

- Tools improve and change often
- Each tool has strengths and weak spots
- Testing teaches you which tool fits which job
- Clients care about the result, not the tool

Remember

Test both with the same prompt before you choose.

A FAIR TEST

Same prompt, same rules.

- Use the exact same prompt in both tools
- Run each prompt once or twice, no extra edits
- Save every result with the tool name
- Score each result in the same way

Tip

Change only the tool. Never change the prompt between tests.

SCORE SHEET

Score each result 1 to 5.

	Gemini	ChatGPT
Follows the prompt		
Text is correct		
Looks realistic or in style		
Faces and hands		
Easy to edit and refine		
Speed		

CHOOSING

Pick the right tool.

- Try the same prompt in both and compare the scores
- Note what each tool did best
- Use the tool that gives the best result for your task
- Keep notes: results change as tools update

Habit

Write one line after each test: which tool, which task, which won.

DEBUGGING

Problem, cause, fix.

Problem	Likely cause	Fix
Wrong subject	Unclear subject	Name the subject first
Extra objects	No limits set	Add negatives
Wrong style	Style not named	Name one clear style
Spelling errors	Long text	Short text in quotes
Odd hands or faces	Far shot, complex pose	Use a closer, simpler shot
Character changes	Description not repeated	Paste the full description

DEBUG STEPS

Four steps to a better prompt.

- Look: what exactly is wrong?
- Name the problem in one sentence
- Change only one thing in the prompt
- Compare the new result with the old one

Rule

If you change five things, you cannot learn which one worked.

BEFORE AND AFTER

Four prompt fixes.

1 Subject	Before: "a dog in a park". After: "A golden retriever sitting on green grass in a park, photo, medium shot, soft afternoon light."
2 Extras	Before: "a city street". After: "An empty city street at sunrise, wide shot, golden light. No cars, no people, no text."
3 Text	Before: "a poster about sale". After: "A poster with the words "BIG SALE" in bold red letters, white background, flat design."
4 Character	Before: "the same man at a cafe". After: "Same character: a 25 year old man, short black hair, glasses, green hoodie, sitting in a cafe."

HANDS ON

Run your own showdown.

- [ ] Pick three prompts: a product, a poster and a person
- [ ] Run each in Gemini and ChatGPT
- [ ] Fill the score sheet for each result
- [ ] Find one problem and name its cause
- [ ] Fix it with one change and test again
- [ ] Write which tool you would use for each task

QUICK CHECK

Five questions.

- [ ] Why use the same prompt in both tools?
- [ ] Name three scoring criteria
- [ ] What is the first step of debugging?
- [ ] Why change one thing at a time?
- [ ] How do you fix spelling errors in images?

RECAP

What you learned today.

Covered

- A fair tool comparison
- The score sheet
- Problem, cause and fix

Homework

- Complete one more showdown
- Write your debug notes
- Bring your diary

Next class

- Google Flow overview
- Interface and projects
- Models and first generations
