WEEK 4 | DAY 4

Google Flow Overview.

Meet the tool for AI video clips and scenes.

10:00 a.m. - 12:00 p.m. | Multan Office

Instructor Muhammad Farukh F.

TODAY'S AGENDA

Two hours, eight steps.

10:00	Recap: image tools and debugging	10 min
10:10	What is Google Flow?	10 min
10:20	Interface and projects	25 min
10:45	Short break	10 min
10:55	Models and credits	20 min
11:15	First generations	20 min
11:35	Hands on	15 min
11:50	Quick check and recap	10 min

WHAT IS FLOW

AI filmmaking in the browser.

- Flow turns prompts into short video clips
- You can build scenes from several clips
- It works with Google video models such as Veo
- Access, features and limits depend on your account and country

Note

Check your own access and plan before class. Tools change quickly.

CORE IDEAS

Words you will see.

Project

One folder for your whole film

Clip

One generated video

Scene

Clips arranged in order

Prompt

The text you write

Frames

Start and end pictures for a clip

Ingredients

Images used to guide a clip

THE INTERFACE

Find your way around.

- Start or open a project
- Prompt box: where you describe the shot
- Settings: model, shape and number of results
- Library and timeline: review and arrange clips

Tip

Open a new project for each story. Keep names clear.

MODELS AND CREDITS

Know your limits.

- Different models trade speed against quality
- Each generation uses credits
- Fast modes cost less than top quality modes
- Test ideas cheaply first, then make the final version

Habit

Write a short prompt, test it, then improve it before spending more credits.

FIRST GENERATIONS

Make your first clip.

- Create a new project
- Write a prompt: shot, subject, action, scene, light, camera move
- Choose the shape: 16:9 or 9:16
- Generate, watch, and note what to improve

Example

Slow push in on a cup of tea on a wooden table, steam rising, warm morning light, soft piano, 8 seconds.

PROMPTING FOR VIDEO

Use the video formula.

- Shot and subject
- Action and scene
- Style, light and mood
- Camera movement, sound and length

Remember

One clear action and one clear camera move per clip.

EXAMPLES

Four Flow prompts.

1 Close up	Close up of hands pouring tea into a glass cup, steam rising, wooden table, warm light, slow push in, soft music, 8 seconds.
2 Drone	Aerial shot over green fields at sunrise, a train in the distance, slow forward movement, golden light, wind sound, 8 seconds.
3 Vertical	Rain drops on a window, blurred city lights behind, static camera, cool blue tones, gentle rain sound, 6 seconds, vertical 9:16.
4 Product	A steel water bottle rotating slowly on a white table, close up, soft studio light, clean mood, smooth orbit camera, 6 seconds.

RESPONSIBLE USE

Create honestly.

- Do not make fake videos of real people
- Check each clip for odd motion and faces
- Tell clients when AI made the video
- Keep your prompts and settings in your notes

Rule

AI video must help your story, not mislead viewers.

HANDS ON

Generate your first clips.

- [ ] Open or create a Flow project
- [ ] Write one video prompt with all the parts
- [ ] Generate and review the result
- [ ] Change one thing and generate again
- [ ] Compare the two clips
- [ ] Download the best one and save the prompt

QUICK CHECK

Five questions.

- [ ] What is a project in Flow?
- [ ] What do credits control?
- [ ] Name three parts of a video prompt
- [ ] Why test with a short prompt first?
- [ ] Name one responsible use rule

RECAP

What you learned today.

Covered

- What Flow is
- Interface, models and credits
- First generations and prompts

Homework

- Generate three clips
- Save the best prompt
- Bring your diary

Next class

- Storyboarding
- Planning scenes
- Shot lists
